GitLab

-The ability to make it confidential to raise security.

-Can run clones in the background.

-getting started

      -has a wide range of getting started tools including videos

            -some are locked behind making an account

      -they are comprehensive with bolded letters and images

            -due to the sheer amount and the website using the sides to link to other pages does come off as a little cluttered.

      -on the main page at the foot of the site the is an option called getting started.

      -Gitlabs first commit was done Oct 8 2011 and they are still in development

      -They have a list of 60 Businesses that work with them including Goldman Sachs and nvidia

Bugsnag

-Leaves a list before an error to narrow down the cause.

-Supports a wide range of browsers.

-getting started

      -could not find how to get started on there website had to google

      -the getting started page is very bare bones and pretty much says just do these 5 steps. May have more detailed instructions during procedures but not very user friendly for new users.

      -they had a list of many big-name brands including lyft, WB games, tinder and Mercedes-Benz .io

      -first repository Feb 27 2013 and still in development
